

Health Care Industry

Challenges

- Lack of visibility on the impacts Covid-19 had on the patients
- Inability to predict when patients are going to drop-off from their treatment plans

Solutions

- Find relevant Data and remove identifiers in order to maintain patient anonymity
- Create UDS using automated Data pipelines
- Develop prescriptive and predictive models respectively

Benefits

- The resulting models provided actionable insights
 - Impact on their operations
 - Indication when patients are likely to drop-off from treatment
